# DIY – DESIGN PATENT APPLICATION PROCEDURE

## *Complete Comprehensive Instructional Guide*

### *2011 Revised Edition*

Thank you for your purchase of our powerful product. Gaining a Design Patent doesn't have to be complicated or expensive. What it takes is some knowledge of how it is done effectively. That is exactly what we do at the Mars Rising Network. This is not a book or a long paged dissertation of the history of patents or any of the FLUFF you see out there. You will see a pre-prepared patent that you will fill in the blanks along with the proper forms from the USPTO and the examining attorney will accept the application. We get you the GOOD STUFF instead of the FLUFF. We are going to get right to it and not waste any of your time.

A Design Patent is a simple way of protecting your actual design and or ornamental design of your product. It only has one claim and one set of drawings. The application paperwork is available on the USPTO site ([www.uspto.gov](http://www.uspto.gov)). We will take you through the website and you will print every document you need for **free** and we will show you the proper way to fill out the paperwork. We will also give you the actual Arrangement of Application. This is what the examining attorney has to see and it has to be arranged in a certain order with the specification, cited classifications from your search, your sequence listing and all other sections to be filled out. We will take a step by step approach to your patent procedure and when you are finished you are on your way to gaining your Design Patent.

First we must tell you that **NO ONE CAN GUARANTEE YOU A PATENT**. You can go to any patent attorney anywhere and they cannot guarantee you the same. What we can do is prepare everything properly so that you will receive your first response from the examining attorney and you have the opportunity to respond in an intelligent and knowledgeable manner. The relationship between you and the examining attorney can be a very tense one or it can be a very cordial one. Knowing your product and its design is very important and how to proceed is most important. When you receive your first response they will tell you exactly what they want to see in your response. That is a large part of what we will be working on through this process and procedure.

**THIS IS WHERE YOU  
SHOULD PRINT THIS  
OUT**

You are about to see the actual Patent Application itself and you will need to follow it closely by reading it as we go along.

**HERE IT IS:**
