

# “BittBooks”

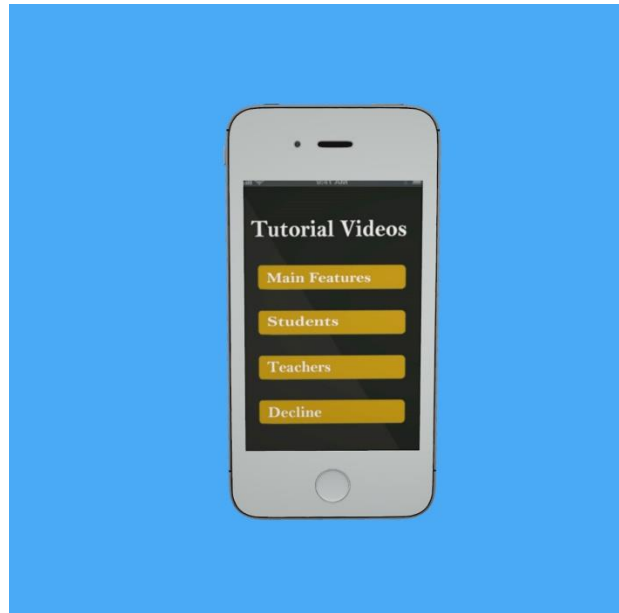

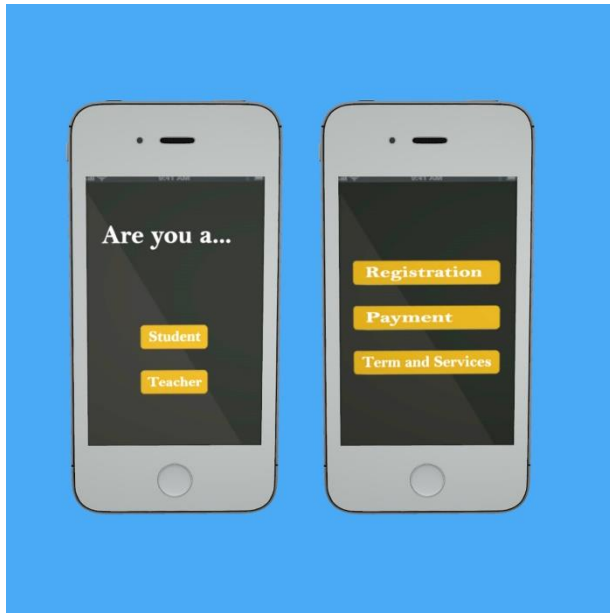

## **The BittBooks is a one of a kind on the go textbook App Access Online Textbooks Anywhere – Public and Private Schools**

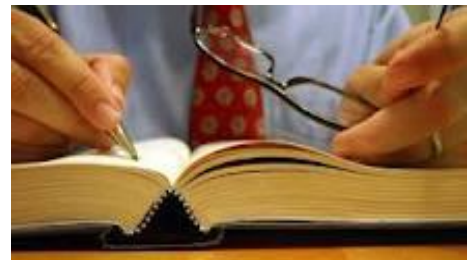

**BittBooks is a wonderful type of book app that allow users to access a database of textbooks and other reading materials that normally cost hundreds of dollars to purchase/rent. It includes textbooks that are used by public and private universities as well as school districts such as high schools, middle schools, and elementary schools. There are even teacher's editions of the textbooks which are not available to the students. The app includes the feature for the student, or teacher, to receive the textbook in the mail as a hard copy. Bittbooks would be available for a monthly/yearly subscription fee. Royalties are paid to the publishers and authors who sells their book with BittBooks.**

**This App can be far more attractive to all parties involved because everything today is about being on the go and being able to have information at your fingertips; literally. Instead of having to constantly pay out for new books to replace ripped up or lost books this app allows to save paper and money on schools as well as students. It's almost like having a virtual library in your hand! With the monthly subscription it would sell better than normal books since people only need to use it while they have classes that require books and they don't have to try to resell their books, or pay insane prices to have access to the tools they need for success in the classroom.**

**With the BittBooks App we can bring our school systems up to speed with current technology and flourish all parties involved. This product would be low cost on the Apple & Android market making it a high volume sales product.**

The inventor, Samuel Bittner, lives in Las Vegas Nevada and had an idea for a better way to access learning text books. Samuel contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product. He is actively seeking a company that would have an interest in licensing the product for a royalty.

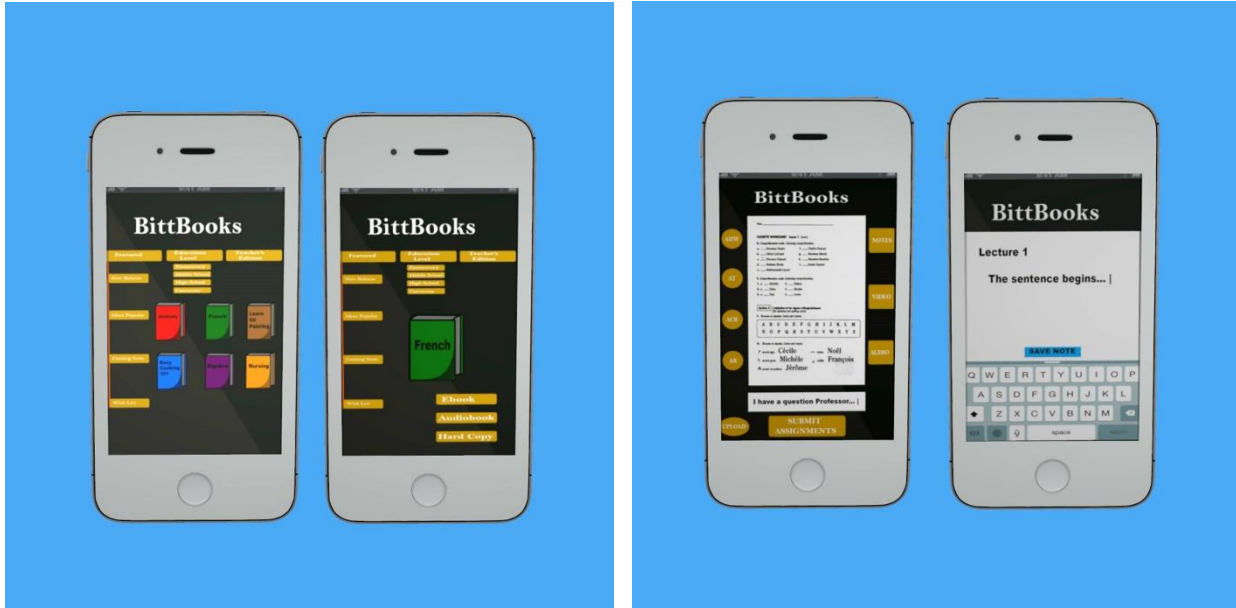

## Patent Ability & Engineering

A provisional and design patent application has been filed as of September 2016. The Patent Search was performed by The Mars Rising Network and revealed nothing similar and that a granted patent could be obtained because of the unique design and functionality of the device as compared to other known devices.

## The Market

The Domestic Market is very large to say the least. This product would sell in all online App stores in the USA and throughout the international market.

The retail price would be from \$4.99 to \$149.99/month. The cost to manufacture would be from \$999.00 to \$4999.00. The costs are an estimate of course ranging from USA or overseas manufacturing and distribution.

If you have an interest in more information regarding the BittBooks and are a serious company that would be interested in a licensing agreement or distribution please contact me directly.

Sincerely;

Samuel Bittner / Inventor / Patent Holder
