

“Easy Stick-On Bib”

**The Easy Stick-On Bib is a one of a kind universal nonintrusive bib
Easy To Use – Safe For All – Conforms To Body – Flexible – Disposable**

The Easy Stick-On Bib is a disposable bib which can stick to any onesie for kids & babies. It conforms to the surface since the film is flexible and allows for a wide span of movement without falling off. It's simple to use, and comes in disposable packs so no need to worry about washing it and having it get old. The film is ideally something that is safe for children, and will provide the best resistance against food and spills.

Kids and babies often fall asleep with a bib on and it can be difficult to take it off without waking them up. Another problem with traditional bibs is that it can be hazardous to the kids if they fall asleep with them on. The bindings can choke them or irritate their skin after a while. With the Easy Stick-On Bib you no longer have to worry about that since there are no bindings that go around the neck and the film is thin and flexible. This will also keep the bib from curling up in the child's face which can be frustrating to them. Most kids try to pull bibs off because they are very intrusive to their space and face.

This bib is nonintrusive so children will have a lesser tendency to pick and pull at it. Not only would this make falling asleep in the bib safer, but just think about how much it could save on the laundry bill! How many times have you just put on a onesie and then the child spills, or spits out, a drink all over it? Well, with this Easy Stick-On Bib you no longer have to worry about so much! This product would be low cost on the retail shelf and could sell in any big box, and specialty, stores making it a high volume sales product.

The inventor, Anthony Parker Lives in San Antonio, Texas and had an idea for a better way for bibs to be used. Anthony contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product. He is actively seeking a company that would have an interest in licensing the product for a royalty.

Patent Ability & Engineering

A provisional and design patent application has been filed as of August 2016. The Patent Search was performed by The Mars Rising Network and revealed nothing similar and that a granted patent could be obtained because of the unique design and functionality of the device as compared to other known devices.

The Market

The Domestic Market is very large to say the least. This product would sell in approximately 150,000 retail stores in the USA and throughout the international market.

The retail price would be from \$4.99 to \$19.99. The wholesale amount would be from \$3.00 to \$9.00 and the cost to manufacture would be from \$1.00 to \$4.00. The costs are an estimate of course ranging from USA or overseas manufacturing and distribution.

If you have an interest in more information regarding the Easy Stick-On Bib and are a serious company that would be interested in a licensing agreement or distribution please contact me directly.

Sincerely;

Anthony Parker / Inventor / Patent Holder
