

# My Gospel JukeBox

## Summary

Katrina Gilbert invented a gospel singer invention to encourage the singing of gospel songs as a form of worship and edification. The present invention may find use with people of all ages; however it finds the majority of use with children.

The device comprises a means for playing music from electronic files that may be pre-loaded. It may resemble a jukebox and has a microphone that a singer can sing into. A list of gospel songs may be available in digital format for play and singing along to. Certain versions may display song titles and/or the words to follow.

The device may also include Bible lessons, Scriptures and other ways to teach children about spirituality. My Gospel jukebox embodiments will display gospel song titles on a monitor, The promises of God, and teaching Scriptures and other ways to teach children about Jesus Christ will be available with the device having a microphone, volume control, fast forward button, rewind button, and record buttons in a control panel.

The present invention may be used to encourage youngsters to sing and further may be used to teach them.
