

Introducing the

Playbook Controller

“Increase the playability of your Playstation™”

TARGET MARKET:

- Multi-player sports game competitors.

FEATURES:

- Allows private selection of plays (as opposed to it being public on the TV screen).
- Long battery life.
- Easy to understand screen.

PATENT INFORMATION

A provisional and design patent application has been filed as of January 2018. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique device could be patented and brought into people's homes.

SUMMARY

The **Playbook Controller** is a gaming peripheral that gives users the ability to play multi-player sports games without letting their opponent know their next move. A small touch screen, wrapped in protective silicone, allows users to take their play calling off the big screen and into their hands.

The Playbook Controller touch screen is connected to the controller through Bluetooth. The screen does not require headphone jacks or powerful computing components, so it can be very slim with long battery life. It's

charged with a micro USB port on the bottom of the case. The port is connected to the screen with a small extender cable hidden in the silicone case.

The screen adds an easy to understand peripheral for users already used to a myriad of touch screens in daily life, used for communication and entertainment. Coders and game designers are sure to take full advantage of the added functionality and input options. They can design mini-games, expanded menu systems, or add new communication tools to enhance game play and interface options for their audience.

The Playbook Controller attaches to standard Playstation 4 controllers in two ways. The first is the functional headphone plug. This plug is connected to a short audio cable embedded in the silicone case. The cable ends with a female headphone jack at the bottom of the unit. So the functionality of the jack is not disturbed by attaching the Playbook Controller to the bottom of the standard controller. A non-functional extension plug also fits snugly into the extension port on the bottom of the standard controller.

Stability wings further support the Playbook Controller during game play. The silicone wings rest securely on the standard controller grips. The Playbook Controller wraps firmly around the grips and includes a bulge of soft silicone on the bottom to provide cushion for the players hands.

Easy to read display fits right onto your Playstation™ controller

About the Developer

The inventor, Brandy Chatman of Long Beach, CA had an idea to be able to play sports games without your opponent seeing your plays. Brandy contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty.
